

cryptosolartech

blockchain & energy for a better world

Cryptosolartech is the first 100% Spanish blockchain company, that integrates clean energy into its project, cryptocurrency mining as well as a plant of photovoltaic solar panels created to generate electricity.

With a clearly sustainable and efficient mission, designed to have a positive impact on both the energetic and technological level.

WHAT IS CRYPTOSOLARTECH?

In cryptosolartech we develop cryptocurrency mining, obtaining our own with the help of 3.000 ASICs, thus mining in two different variants to optimize profitability.

In addition we can self-supply the farm with our own energy from a photovoltaic plant installed in the province of Seville (Spain), this energy can also be distributed as a service for electricity companies.

SOLAR ENERGY INVESTMENT PHOTOVOLTAIC INSTALLATIONS TO POOL

Cryptosolartech, is a digital asset, whose holding will indicate possession of a fraction, the cryptocurrency mining farm and the photovoltaic solar energy plant.

Cryptocurrency mining

In the world of cryptocurrencies money is extracted, a process known as mining.

Mathematical problem

Money record movements in the blockchain obtaining thus a small commission in each operation.

Creation of blocks

Application of a mathematical formula that, when solving it and creating a successful hash, rewards us with the cryptocurrency that we are mining.

Never forget that ...

in this world, cryptocurrencies are not created, nor destroyed, but extracted.

RESPIRA ENERGÍA GUARANTEE AGREEMENT

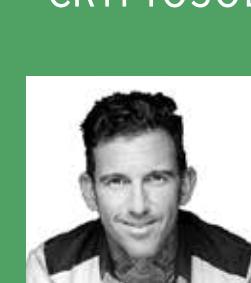

Cryptosolartech has already signed a 15-year power purchase contract with the company responsible for supplying interested consumers.
