

Altex is a digital platform that unites a decentralized exchange, personalized crypto-messenger and Smart Safe. Developed based on iOS Android and Windows Mobile platforms.

**Altex is a mobile application based on powerful Blockchain technology that gives crypto traders unbridled access to a decentralized exchange platform, a crypto messenger and a smart safe.**

With the crypto exchange platform - **AltDEX**, users can trade with multiple coins, exchange digital coins for fiat currency, make purchases using stored assets and also perform coin transfers.

**The AltMessenger** lets users keep in touch with other traders from around the world via private message and public chats.

**The AltSafe** keeps all the money safe and secure, displays the account balance, and regularly updates users with information regarding current prices of digital coins and market trends.

## AltDEX

We identified a need of most crypto traders and built a solution around it - Most crypto traders need to manage multiple exchanges to cater for different cryptocurrencies. These exchanges needed to be chosen based on certain criteria;

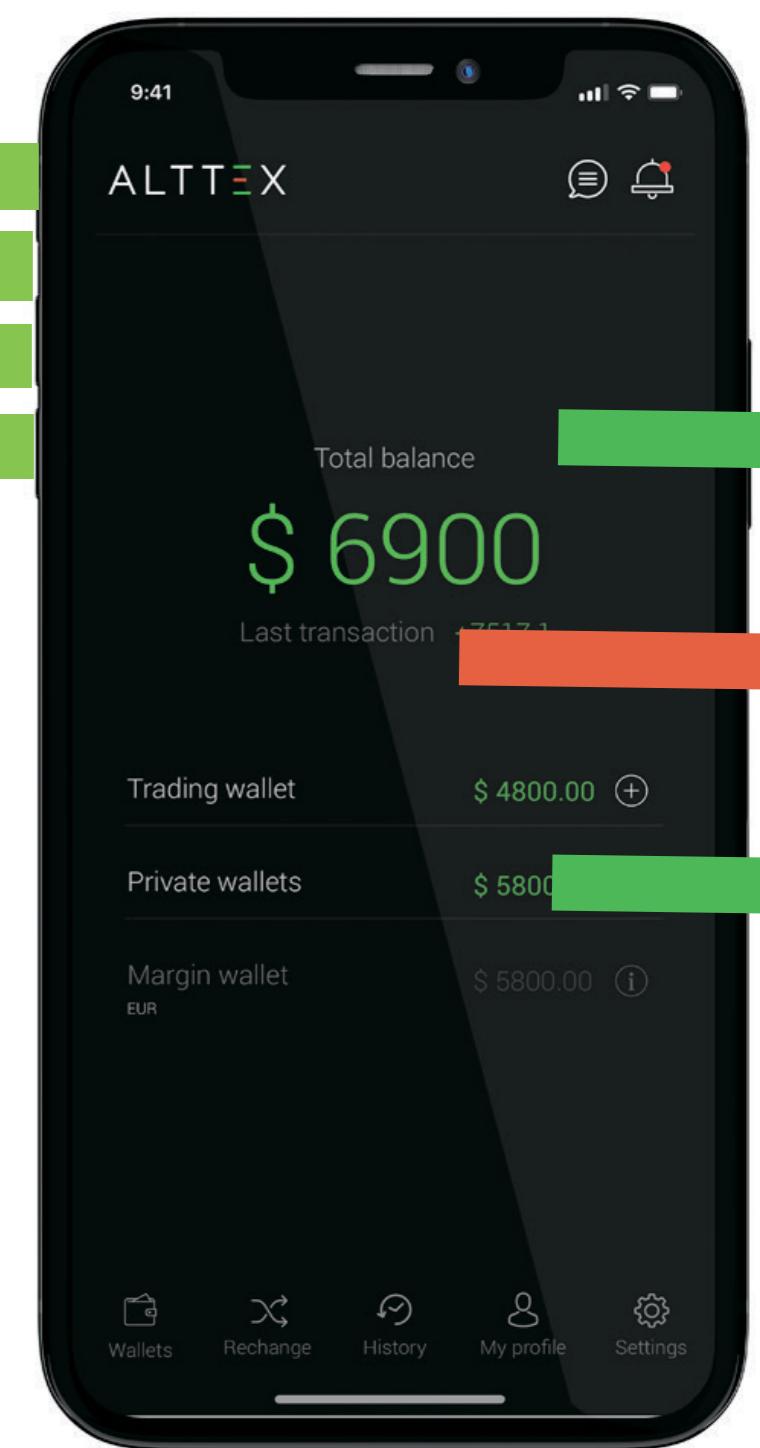

- Simplicity of the user interface;**
- Selection of currency pairs;**
- How quickly tokens can be added;**
- Security of the exchange platform**

Altex was developed to bring it all together with a decentralized, multi-currency trading platform with top notch security protocols to meet the needs of all traders.

It is decentralized, which means that the system is secure and prevents the exchange from hackers and DDoS-attacks.

AltDEX security system is quite reliable. For extra level of protection we have enabled Touch ID, Face ID, and Pin-code functionality with two-factor authentication via email.

Users can securely buy crypto-currencies with money from a credit or debit card, and withdraw funds with minimum commission. All that is needed for identity verification is a selfie with the card from both side using our special AltScanner.

## AltSafe

We understand that it is easy to make money, but much more difficult to keep it. We have created a system with customizable functions to help users save their cryptocurrencies. A user can specify a timeframe and the money will be inaccessible until the time has elapsed. This will eliminate the possibility of tampering saved funds.

**AltSafe** is an interactive, multi-currency wallet that displays real-time account balances using push notifications. It is a "Warm" wallet, which combines the advantages of Hot (Online) and Cold (Offline) wallets by allowing users to decide how much of their funds they want to keep in both.

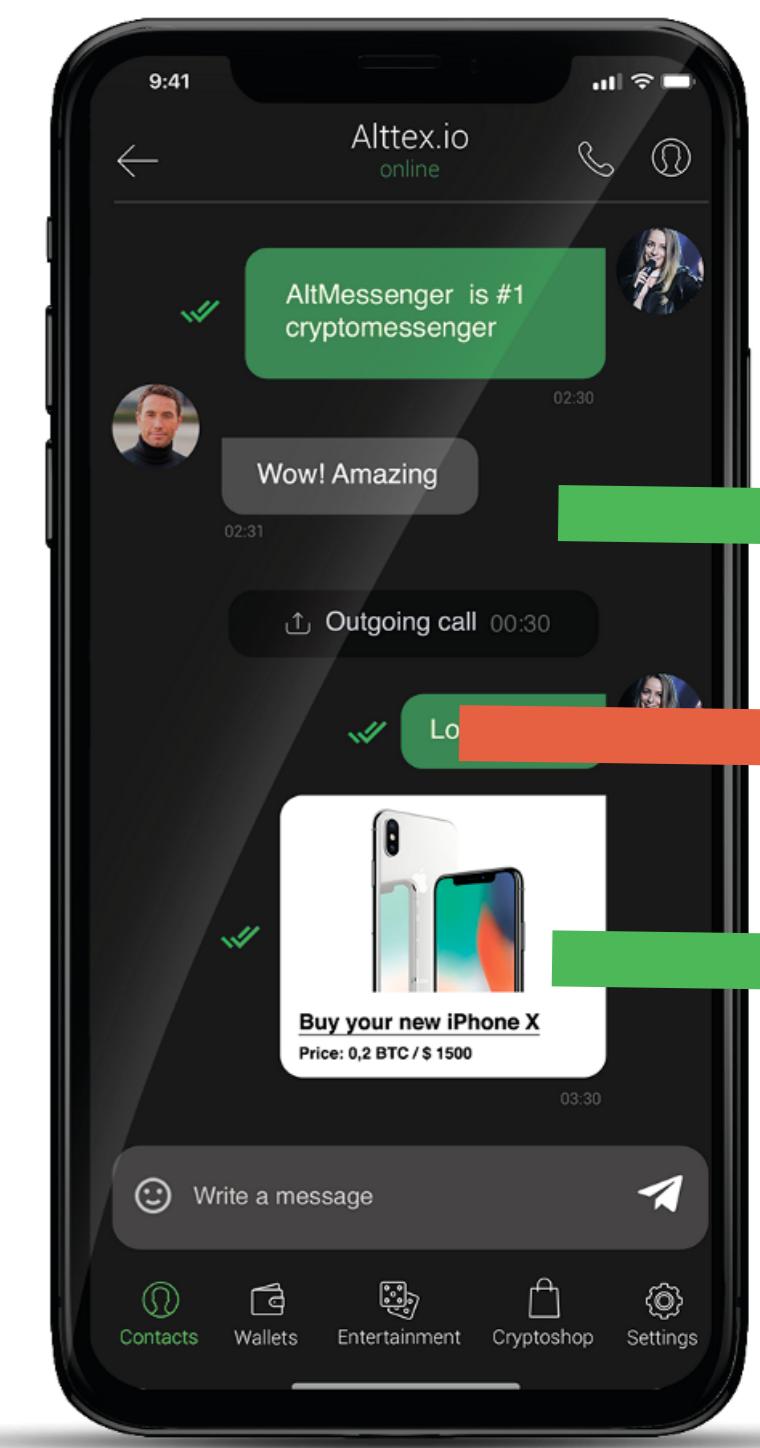

## AltMessenger

AltMessenger is a decentralized messenger powered by Blockchain technology. It has no central servers or information pool; thus, users are completely protected. In addition to its communication functions, it also allows you to purchase goods using crypto wallets, sell items, and receive cryptocurrency. The user interface is very simple and easy to use.

An added advantage of the crypto messenger is that it allows users to make voice calls from any part of the world at some of the lowest rates compared to our competitors.

The fee for voice calls is conveniently deducted from a user's crypto balance, which is customizable to every user.

Another great thing about AltMessenger is that when a user receives a voice call, they receive rewards in Altex cryptocurrency, which they can use to purchase items, trade on the stock exchange, transfer earned money to a bank card, buy applications or games, or simply continue to use them for voice calling.

## ROADMAP

«DEVELOPMENT OF CRYPTO-EXCHANGE» : THE BEGINNING OF THE DEVELOPMENT OF THE CONCEPT OF DECENTRALIZED MOBILE CRYPTO-BUREAU ALTTEX.
