How to Combine All Deviant Coins into one Wallet Address from Multiple Addresses
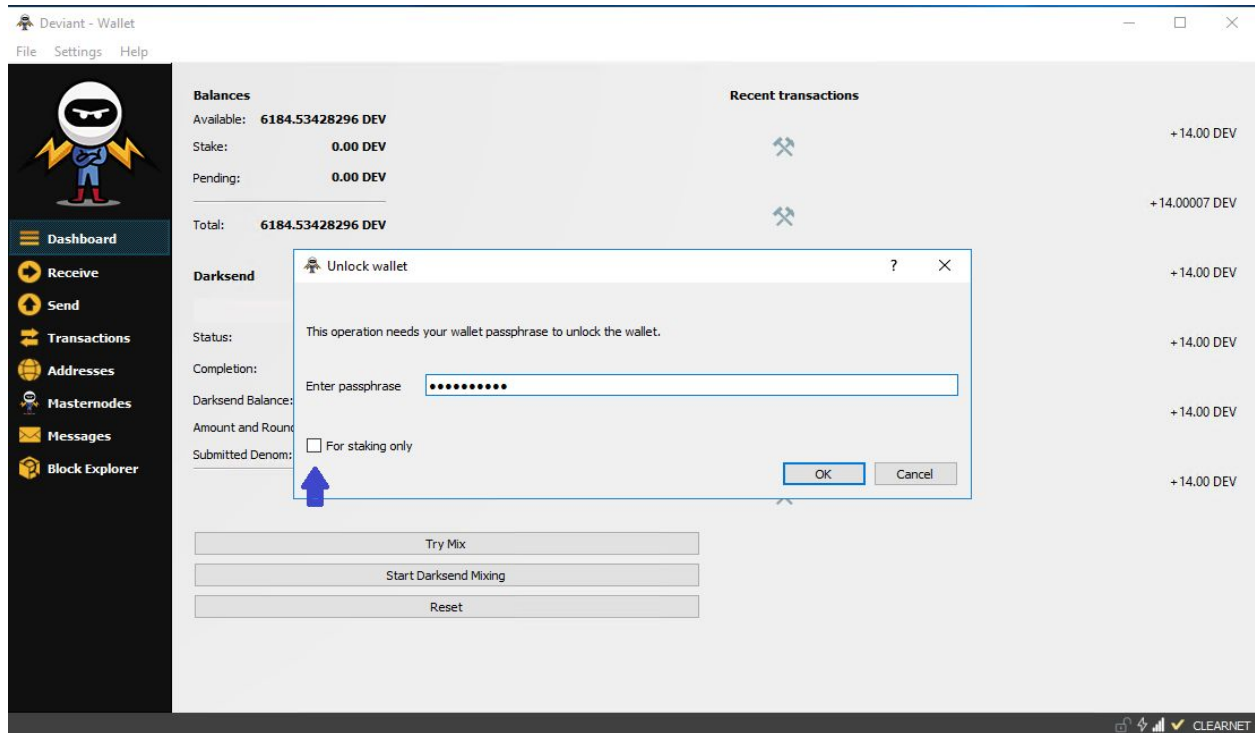

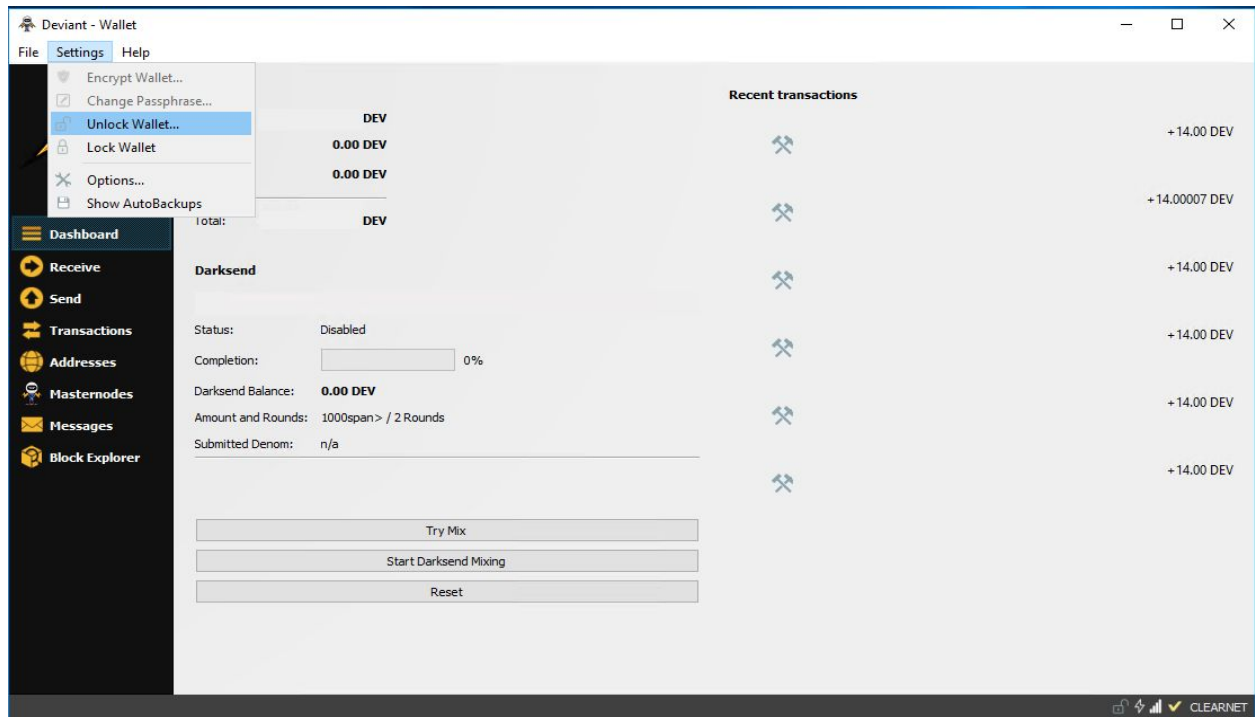

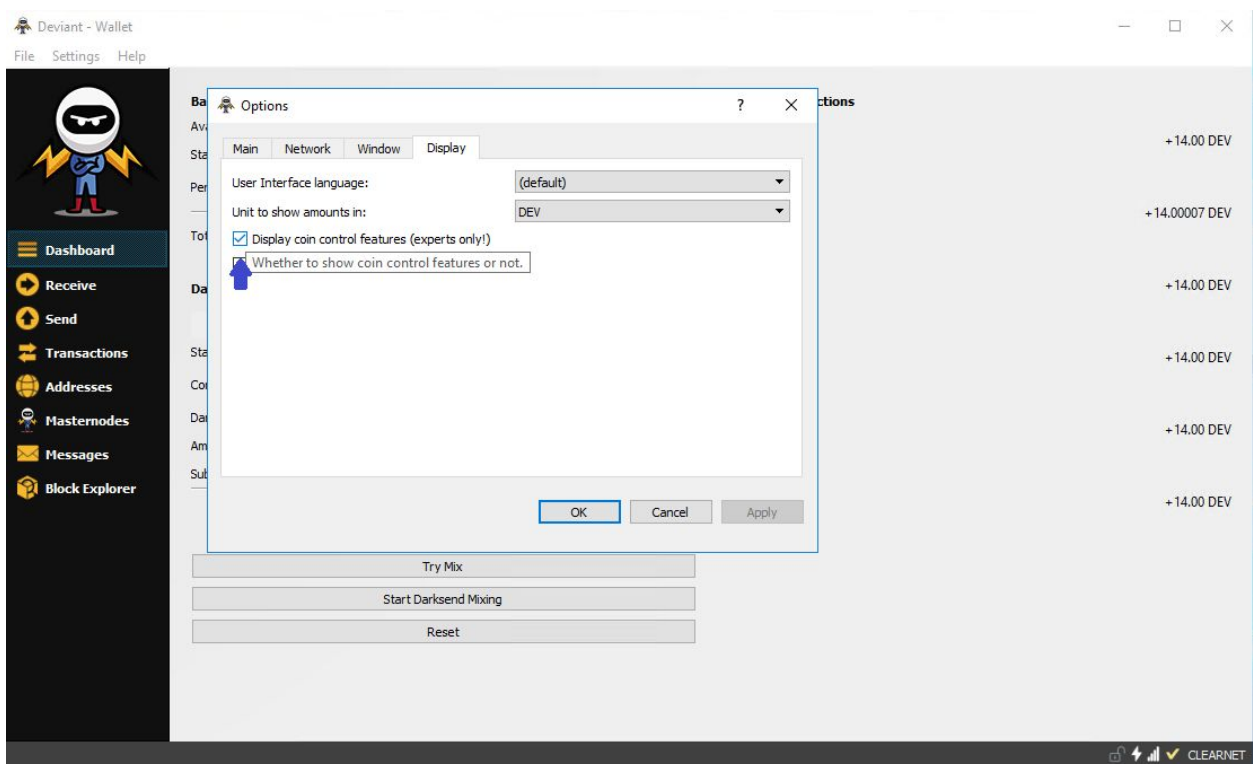

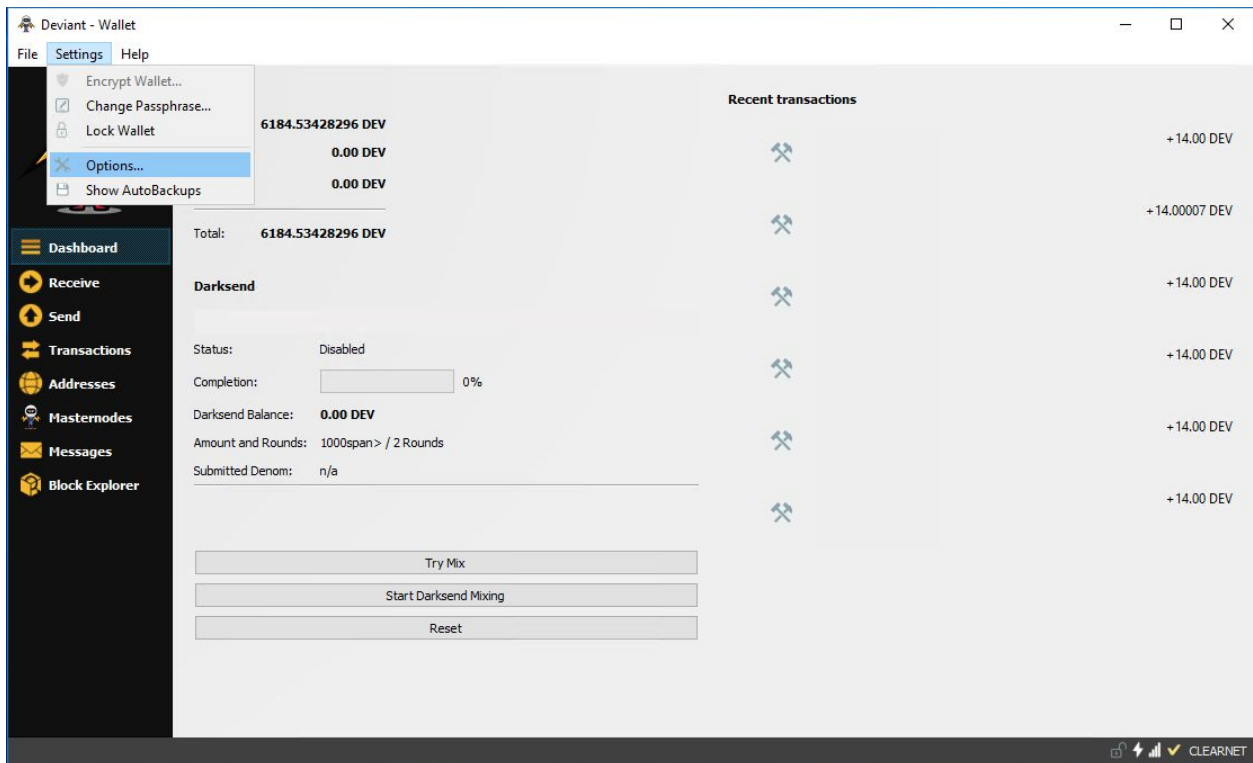

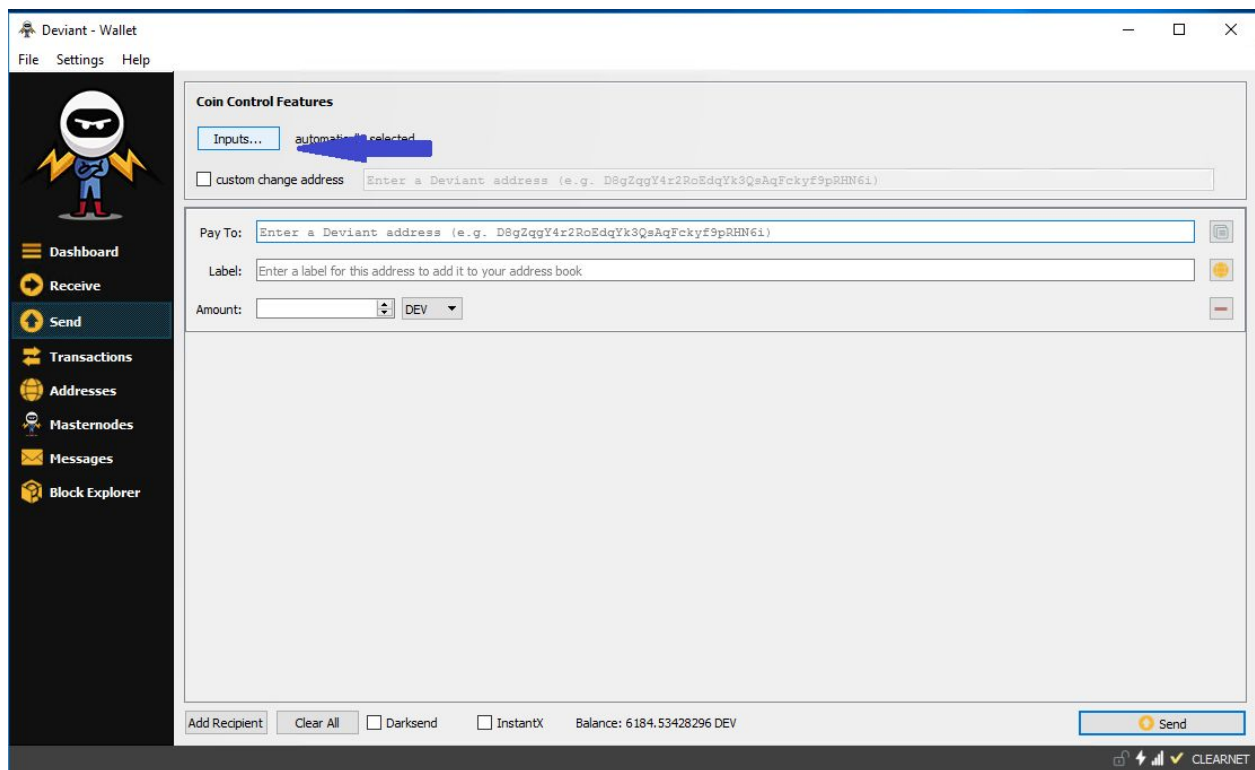

Steps:

1. Open your wallet and make sure it is unlocked. If it is encrypted, go to *Settings>Unlock Wallet>* enter your passphrase, and uncheckmark the *For staking only* box, then hit *OK*.
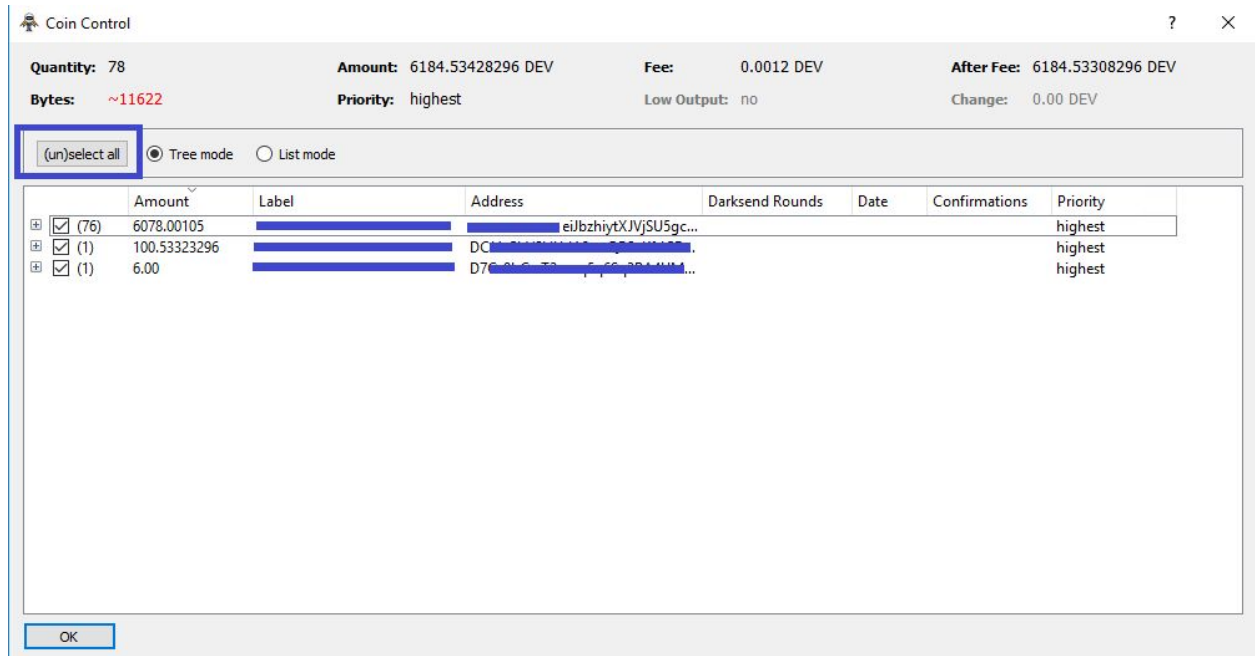

2. Click *Settings* again, *Options*, *Display*, then tick the coin control box and tap *OK*.

3. Click the *Send* tab and then the *Inputs* tab.

4. Click the *Select All* button to checkmark all the boxes of addresses in which you have DEV, then select the wallet address you wish to send your DEV to, right-click, hit *Copy Address*, and tap *OK*.

5. Paste the address you want to send all your DEV to in the *Pay To* field, copy and paste the DEV amount that shows after *After Fee* into the amount field, hit *Send*, then *Yes* when the prompt comes up.

6. After 10 confirmations, go back and check your coin control. It should look like the image below. If so, you have successfully combined your DEV from multiple addresses into one.
